ARTICLE 7: RELEASE AND CLEARANCE OF GOODS

7.1. Pre-arrival processing

Pre-arrival processing provide the submission of declaration data for the raw and semi-finished goods to the relevant authorities prior to the arrival. With this process, time losses and potential additional costs in the foreign trade transactions are reduced. The pre arrival process is implemented since 2019 per maritime and 2021 per air transport:

- Registration of the customs declaration before the goods arrive the country;
- Release of goods directly to the owner without being taken to the temporary storage place.
